

Our robust and practical **System Lab Cabinets** with their many varied functional possibilities are more than design and storage. Accessories and connections are integrated in the best way possible.

Based in our selection of products, we have put together the optimum combination possibilities for you.

WORKING SURFACE

The working surface of the System Lab cabinets (powder-coated Aluminium) is made from especially tough HPL with many useful properties. The surface of Melamin resin is extremely easy to clean.

Mechanical properties:

- » non-abrasive
- » shock-resistant
- » heat-resistant

Chemical properties:

- » stain-resistant
- » chemical-resistant
- » resistant against all organic solvents
- » (boiling) water-resistant

CABLE DUCTING

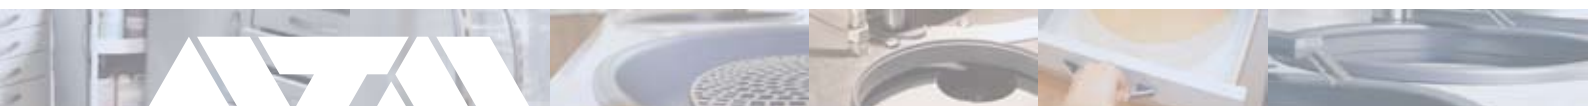

The cable ducting mounted underneath the work-top carries all cables and hides them from view.

ACCESSORIES

Ideal in the case of Systemlab cabinets for units is the integration of accessories such as current distribution, waste water filter system or recirculatory cooling. The installation of rinsing basins and the various combinations e.g. with corner elements or shelves results in a compatible and complete laboratory arrangement with individual suitability.

SUITABILITY

We recommend choosing your laboratory equipment in basalt grey as the ideal colour to fit with our standard grey furniture, but there is also an option to have your own personal colour scheme.
